```
graph TD; Start([start]) --> 70[submit input form with generic item description data, generic auction data and user id and password]; 70 --> 72[receive verification form]; 72 --> 74[extract item number and item key from verification form]; 74 --> 76[store item number and item key in database]; 76 --> 78{last item?}; 78 -- Yes --> A((A)); 78 -- No --> 70;
```

The flowchart illustrates the process of verifying an item. It begins with a 'start' terminal, leading to a process box labeled 'submit input form with generic item description data, generic auction data and user id and password' (70). This is followed by 'receive verification form' (72), which includes a note: 'item number and item key assigned by auction site and placed in verification document'. The next step is 'extract item number and item key from verification form' (74), followed by 'store item number and item key in database' (76). A decision diamond labeled 'last item?' (78) follows. If the answer is 'Yes', the process ends at terminal 'A'. If 'No', the flow loops back to the 'submit input form' step (70).
